DETAILED ACTION

1. Claims 1, 3-10 and 12-17 are presented for examination. Claims 1, 3, 10 and 12 have been amended; claims 2 and 11 have been canceled; claims 14-17 are newly added claims.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1, 10 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gleichauf et al. (6,499,107 B1) in view of Chiu (US 5,101,402).
- 4. Chiu is a prior art reference cited by Examiner on the previous Office Action.
- 5. As per claims 1, 10 and 14, Gleichauf teaches the invention substantially as claimed including a method of reconstructing a session using a first analyzer [4, Fig. 1] coupled to a second analyzer [5, Fig. 1] and a data collector [36, Fig. 2] the method comprising:

Art Unit: 2154

performing session reconstruction on packets received at a first analyzer [4, Fig. 1; 100, 104, Fig. 4; col. 4, lines 4-7]; and

responsive to successful session reconstruction on the first analyzer, sending a first message to at least one of a second analyzer [5, Fig. 1] separate from the first analyzer and a data collector [36, Fig. 2], the first message corresponding to session data [col. 8, lines 18-30].

- 6. Gleichauf does not specifically teach the steps of sending one or more messages comprises unrecognized packet to the second analyzer responsive to unsuccessful session reconstruction on the first analyzer and the second analyzer recognizes the unrecognized packets to successfully reconstruct the session.
- 7. However, Chiu on the other hand teaches the step of sending one or more messages comprises unrecognized packet to the second analyzer responsive to unsuccessful session reconstruction on the first analyzer and the second analyzer recognizes the unrecognized packets to successfully reconstruct the session [Fig. 9; col. 8, line 61 col. 9, line 25]. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to combine the teaching of Gleichauf and Chiu because doing so would improve the functionality of the system by sharing information between different analyzers for recognizing a packet at the most effort instead of simply discard a unrecognized packet at the first analyzer. One of ordinary

Art Unit: 2154

skill in the art would have been motivated to modify Gleichauf's system with Chiu's sending step to improve the performance of the system.

- 8. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over McCreery et al. (US 5,787,253) in view of Chiu (US 5,101,402).
- 9. As per claims 1, 6 and 14, McCreery teaches the invention substantially as claimed including a method of reconstructing a session using a first analyzer [336, Fig. 4c] coupled to a second analyzer [346, Fig. 4c] and a data collector [342, Fig. 4c] the method comprising:

performing session reconstruction analysis on packets received at the first analyzer [col. 2, lines 20-22]; and

responsive to successful session reconstruction on a first analyzer, sending a first message to at least one of a second analyzer and the data collector, the first message corresponding to session data [col. 2, lines 22-24 & 34-39].

10. McCreery does not specifically teach steps of sending one or more messages comprises unrecognized packet to the second analyzer responsive to unsuccessful session reconstruction on the first analyzer and the second analyzer recognizes the unrecognized packets to successfully reconstruct the session.

Art Unit: 2154

- 11. However, Chiu on the other hand teaches the step of sending one or more messages comprises unrecognized packet to the second analyzer responsive to unsuccessful session reconstruction on the first analyzer and the second analyzer recognizes the unrecognized packets to successfully reconstruct the session [Fig. 9; col. 8, line 61 col. 9, line 25]. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to combine the teaching of McCreery and Chiu because doing so would improve the functionality of the system by sharing information between different analyzers for recognizing a packet at the most effort instead of simply discard a unrecognized packet at the first analyzer. One of ordinary skill in the art would have been motivated to modify McCreery's system with Chiu's sending step to improve the performance of the system.
- 12. As per claims 3-4 and 15-16, McCreery teaches that the one or more messages from the first analyzer to the second analyzer further comprise a time the packet was received and an address information for the packet [col. 2, lines 22-24].
- 13. As per claims 5 and 17, McCreery teaches the step of filtering the packets before them reach the first analyzer [col. 2, lines 16-20].
- 14. As per claims 7-9, McCreery teaches that the second analyzer performing the session reconstruction based on the messages received from first analyzer and sending a second message to the data collector [col. 2, lines 34-39].

Page 5

Application/Control Number: 09/553,261 Page 6

Art Unit: 2154

15. As per claims 10-13, since they are system claims of claims 1-9, they are rejected for the same basis as claims 1-9 above.

- 16. Claim 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Abromavage et al. (WO 00/68811).
- 17. Abromavage is a prior art reference cited by Applicant, filed on 6/25/01.
- 18. As per claims 1, 6 and 14, Abromavage teaches the invention substantially as claimed including a method of reconstructing a session using a first analyzer coupled to a second analyzer [112, 120, Fig. 1] and a data collector [122, Fig. 1] the method comprising:

performing session reconstruction analysis on packets received at the first analyzer [col. 5, lines 14-19; col. 6, lines 3-10]; and

responsive to successful session reconstruction on a first analyzer, sending a first message to at least one of a second analyzer and the data collector, the first message corresponding to session data [col. 6, lines 14-22].

19. Abromavage does not specifically teach steps of sending one or more messages comprises unrecognized packet to the second analyzer responsive to unsuccessful session reconstruction on the first analyzer and the second analyzer recognizes the unrecognized packets to successfully reconstruct the session.

Art Unit: 2154

20. However, Chiu on the other hand teaches the step of sending one or more messages comprises unrecognized packet to the second analyzer responsive to unsuccessful session reconstruction on the first analyzer and the second analyzer recognizes the unrecognized packets to successfully reconstruct the session [Fig. 9; col. 8, line 61 – col. 9, line 25]. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to combine the teaching of Abromavage and Chiu because doing so would improve the functionality of the system by sharing information between different analyzers for recognizing a packet at the most effort instead of simply discard a unrecognized packet at the first analyzer. One of ordinary skill in the art would have been motivated to modify Abromavage's system with Chiu's sending step to improve the performance of the system.

- 21. As per claims 3-4 and 15-16, Abromavage teaches that the one or more messages from the first analyzer to the second analyzer further comprise a time the packet was received and an address information for the packet [col. 5, lines 14-19; col. 6, lines 14-15 & 23-27].
- 22. As per claims 7-9, Abromavage teaches that the second analyzer performing the session reconstruction based on the messages received from first analyzer and sending a second message to the data collector [col. 6, lines 16-27; col. 10, lines 3-7].

Page 7

Page 8

Art Unit: 2154

23. As per claims 10-13, since they are system claims of claims 1-9, they are rejected for the same basis as claims 1-9 above.

- 24. Claims 5 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Abromavage et al. (WO 00/68811) in view of McCreery et al. (US 5,787,253).
- 25. As per claims 5 and 17, Abromavage teaches the invention substantially as claimed in claim 1. Abromavage does not specifically teach that the packets received at the first analyzer are output from a filter for controlling which packets in a plurality of packets flowing into the filter reach the first analyzer.
- 26. However, McCreery on the other hand teaches the step of filtering the packets before them reach the first analyzer [col. 2, lines 16-20]. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to filter the packets before analyzing the packets because doing so would relief the burden of the system by avoiding analyzing undesired packets. One of ordinary skill in the art would have been motivated to modify Abromavage's system with McCreery's filter to increase the efficiency of the system.

Conclusion

27. Applicant's arguments with respect to claims 1-17 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 2154

- 28. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP §706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
- 29. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
- 30. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jinsong Hu whose telephone number is (703) 306 5932.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John A. Follansbee, can be reached on (703) 305-8498. The fax number for this Group 2100 is (703) 872-9306.
